Integration Studio Key Features

Connectors

Our pre-built connectors help you integrate your apps seamlessly. Manage all of your data and automate workflows effortlessly.

Notifications

Create and tailor notifications to stay informed and get alerts about upcoming action items using AtomIQ's proactive and reactive notifications framework.

Monitoring

Gain visibility into integrations across your app network. Monitoring tools provide feedback from workflows and components.

Code + Visual Modeling -> Supercharged Developers

AtomIQ is a no-code automation tool for the delight of citizen developers who want instant results. Scripting is also available to create complex orchestrations.

Dynamic Variables

With the power of dynamic variables, complex orchestrations can now be developed. Combining dynamic variables with LC/NC capability gives power to citizen developers.

Rapid Modeling & Tuning

AtomIQ treats automation as an evolving and iterative process to train a machine to perform tasks. It is very easy to tweak, re-plan & troubleshoot decision trees with built-in tools to simulate and troubleshoot.

Visual Workflow Creation UI

Simplify workflow creation and enhance UX to increase superuser satisfaction and improve usability and accessibility.

Traceability of Orchestrations

AtomIQ's detailed continuous monitoring capability can help alert stakeholders during failures or exceptions.

Scheduler

Execute workflows using built-in triggers for date/time, file monitoring, data monitoring, etc.

Event Tasks

Trigger events from your workflows to interface and share data from your execution with external systems.
